FOR IMMEDIATE RELEASE

NEW INNOVATIVE PRODUCT “HITS” THE PROFESSIONAL ELECTRICIAN MARKET. SLUGGO-OX “THE ULTIMATE GROUND ROD DRIVING TOOL”

Fred Foster, a Milford Massachusetts electrician for over 25 years, has been granted a patent for “Sluggo-Ox”™ The Ultimate Ground Rod Driving Tool. Mr. Foster has fulfilled the need to make inserting ground rods and other metal implements safer and easier. This seven pound one piece tool made of heat treated steel can be used in multiple applications and does not require electrical power or air compressors to accomplish its task. This uniquely portable tool safely drives electrical grounding rods and rebar used in construction applications. The device fits over the end of the narrow rod to give a wider more stable striking surface resulting in saving workers both time and effort while preventing mushrooming of the metal and preserving the shape of the rod. The Sluggo-Ox Corporation is a veteran owned company. The product is made in America and is expanding sales to electricians and contractors throughout the United States and internationally.
